ncertainties [n^jet'aləd͡ʒi]

an investigation from Ernst Unding

he shape of the universe will soon be decided. Free of the illusion of the infinite, yet still in the cradle of a place without boundary, those who remain will finally have space to ask:

What is 'not here'?

Uncertainties in Nyetology, the first of its kind, seeks to extend our conception of the world to those places which lurk outside the canonical four dimensional spacetime. Reaching into the dark to extend a left-hand to the sleepers, the dreamers, and the dead, this primer in pure imaginary sciences will equip handlers with all the mythmatical tutelages and inexact standards necessary to reclaim what has been lost, return what has been stolen, and recall when is now.

None of this is real, that's the point.
